Section I	X – Accidental Release or S	pillage	
	Taken in Case Material is Released o		_
Batte	eries that are leakage should be handled with ru	ubber gloves.	
Avo	id direct contact with electrolyte.		
Wea	r protective clothing and a positive pressure Se	elf-Contained Breathing Apparatus (SCBA).	
Section >	(– Handling and Storage		
	ng and storage advice		
Ba	tteries should be handled and stored carefully	to avoid short circuits.	
	o not store in disorderly fashion, or allow metal		
	ver disassemble a battery.		
	o not breathe cell vapors or touch internal mate	rial with bare hands.	
	e cells and batteries shall not be stored in high herwise the cells maybe leakage and can result	temperature ,the maximum temperature allowed is 60 in shortened service life	for a short period during the shipment,

Material Safety Data Sheet for GP 9V Alkaline Batteries

Document Number: MNAB005 Revision:03 Page4 of 4

Section XIV - Transportation Information

In general, all batteries in all forms of transportation (ground, air, or ocean) must be packaged in a safe and responsible manner. Regulatory concerns from all agencies for safe packaging require that batteries be packaged in a manner that prevents short circuits and be contained in "strong outer packaging" that prevents spillage of contents. All original packaging for GP alkaline batteries has been designed to be compliant with these regulatory concerns. Alkaline batteries (sometimes referred to as "Dry cell" batteries) are not listed as dangerous goods under the IATA Dangerous Goods Regulations, ICAO Technical Instructions and the U.S. hazardous materials regulations (49 CFR). These batteries are not subject to the dangerous goods regulations provided they meet the requirements contained in the following special provisions.

Regulatory Body	Special Provisions
ADR	295 - 304, 598
IMDG	UN 3028 Provisions 295 - 304
UN	UN 3028 Provisions 295 - 304
US DOT	49 CFR 172.102 Provision 130
IATA	A123
ICAO	UN 3028 Provisions 295 - 304

All GP alkaline batteries are packed in such a way to prevent short circuits or the generation dangerous quantities of heat and meet the special provisions listed above. In addition, the IATA Dangerous Goods Regulations and ICAO Technical Instructions require the words "not restricted" and the Special Provision number A123 be provided on the air waybill, when an air waybill is issued.

Non-dangerous goods.

Such battery have been packed in inner packaging in such a manner as to effectively prevent short circuit and movement that could lead to short circuit.

Section XV – Regulatory Information

Special requirement be according to the local regulatories.

Section XVI – Other Information

The data in this Material Safety Data Sheet relates only to the specific material designated herein.

Section XVII – Measures for fire extinction

In case of fire, it is permissible to use any class of extinguishing medium on these batteries or their packing material. Cool exterior of batteries if exposed to fire to prevent rupture.

Fire fighters should wear self-contained breathing apparatus.
